Synergy of Nature and Science

DOGOteka Company is dynamic and innovative company founded with the final goal: to revolutionize the wellbeing and health of pets with completely natural products developed with knowledge from modern veterinary science, phytopharmacy and herbal medicine.

On the basis of more than 40 years of clinical experiences

in its own veterinary and breeding practice, upgraded by scientificevidence from modern phytopharmacy, modern small animal veterinary clinical practice and herbal medicine scientific discoveries, effective formulations for completely natural high quality products and solutions for pets health, growth and well-being were developed under the brand name DOGOteka.

The DOGOteka story

It's not just a love for dogs that united Ksenija Oseli Donati (FCI judge) and Ziva Oseli Sustercic founders of DOGOteka Company who raised many Great Danes, among them many World Champion Winners in past decades together (www. baiaazzurraalani.com). A small start-up team led by dr. Patrizio Donati, DVM used many years of experience and knowledge of own practice and breeding, combined with recent discoveries of modern phytopharmacy and veterinary science of small animals.

With love and passion for raising healthy dogs, they strive to empower modern small animal veterinary clinical practice complementing the healing power of nature by integrating completely natural products made by protocols and production technology used for development of human pharmaceutical drugs.

The small start-up team started in Medvode, Slovenia in the year 2013 with a big ambitious plan: to change the world of supplements and pet care by using natural nutrients and ingredients, believing in the new scientific discoveries that show the phytonutrients (from vegetables, fruit, herbs, shellfish ... etc.) as natural reservoirs of molecules and active compounds capable of strengthening and protecting the innate defense mechanisms of the animal's organism, with great potential for healing, rejuvenation and regeneration.

After nearly a decade of hard work, DOGOteka products have gained trust and reputation among hundreds of thousands of customers and their pets, in over 50 countries around the

DOGOteka Worldwide

Dogoteka products are today produced in facilities in Lombardy in Italy with a heart to help make the lives of our dogs and cats of our customers healthier and happier. European headquarters are located in Slovenia and the R & D department in the subsidiary office in the capital city of Lombardy, Milan in Italy. Today customers can buy Dogoteka high quality natural products from veterinary clinics, dealers and distributors worldwide.

Quality, Safety, Effectiveness and Synergy

A special line of high quality natural products for pets, which compose active ingredients of natural origin, were developed with innovative pharmaceutical techniques with the same rigor reserved for the development of human drugs. The quality management system of Dogoteka branded products is based on the rules dictated by the international standards UNI EN ISO 9001: 2008 and UNI CEI EN ISO 13485: 2012 in order to guarantee strict product quality control of every production phase. Ingredients, composition, production, packaging, labeling are under strict quality control to guarantee quality and efficacy of phytotherapeutic products that are safe and effective over time. Additionally, a very important property of DOGOteka products is the synergy and synergistic effect of their ingredients. With synergy, the combined effect of the components is greater than that expected from their arithmetic combination. Most of the products of DOGOteka are PARNUT products, complementary feed intended for PARticular NUTritional purposes, which are specially formulated pet foods designed to assist pets with metabolic issues and so regulated by the European Commission through specific Community acts (Dir. 2008/38 / EC and subsequent amendments). This modern and science-based regulatory framework is the guarantee that pets with particular nutritional needs will have access to the right nutrition. These products are available to assist with conditions including heart disorders, gastrointestinal conditions, weight management, kidney failure or liver disease, skin and fur disorders plus nutrient intolerances.

PET HEALTH IS OUR SUPER PAWER!

DOGOmini®

Dietary complementary feed * in tablets for dogs and cats, useful for supporting joint metabolism in case of osteoarthritis. *Feed with particular nutritional or dietary purposes PARNUT

Enhanced formula with the addition of fish oil.

To our viszla was given the supplement for 6 weeks. During this time she was fed with the industrial food. During this period there was a noticeable improvement in the condition of the front legs. At the moment, the legs are almost straight and this I consider is the merit of the DOGOmini® supplement.

Prepared by Kasia Niemiec Dogoteka Poland

COMPOSITION

Chondroitin sulfate Glucosamine sulfate ProTrixan®

BIOCELL COLLAGEN®

- -65% collagen II
- 25% chondroitin sulfate
- 10% hyaluronic acid Devil's Claw Vitamin E

Vitamin C Selenium

PROTRIXAN®

An innovative blend for exclusive use in the Dogoteka veterinary line, which brings together naturally derived components extensively studied and validated by international scientific literature in a balanced and synergistic form.

Protrixan® is a mix made up of dry extract of Garcinia cambogia, Garcinia mangostana powder with antioxidant action and Turmeric powder, which supports joint function and also has an antioxidant action.

INDICATIONS

Also useful for supporting osteoarticular function, tendons and ligaments in dogs in general or e.g. In dogs exposed to intensive work.

cats nad dogs 5 – 10 kg	1 tablet
dogs 10 – 20 kg	2 tablets
dogs over 20 kg	3 tablets

PACKAGING

DOGOmini® complementary feed for dogs & cats, 30 tablets of 1 g.

The owner turned to us for her puppy with obvious problems of carpal ligament laxity. The puppy was fed an industrial diet. We advised the owner to continue with the diet she was using by adding DOGOteka supplements – the TRIS - DOGOjunior - DOGOmini and MultiAdapt in the dosage of 1 tablet per day to the daily diet. The photos show a slight improvement already after 1 week of administration and a complete resolution of the problem 4 weeks later.

_4 month old Siberian husky with carpal ligament laxity problems, Prepared by Dogoteka Italy

DOGOmaxy®

Dietary complementary feed* in tablets for large breed dogs, useful for supporting joint metabolism in case of osteoarthritis. *Feed with particular nutritional or dietary purposes **PARNUT**

Enhanced formula with the addition of fish oil.

JOINT AND CARTILAGE SUPPORT FOR LARGE BREED

DOGS.

His breeder Anita Viragh from Hungary realized the seriousness of the situation when she went to see the puppy and immediately wrote to us asking for help. First we advised the use of LactoAdapt and a few days later we introduced the tris therapy:

- DogoMaxy
- DogoJunior
- MultiAdapt

Thank you Anita Viragh for letting us share the photos and for believing in us.

During the growth of my Newfoundland puppy I observed an incorrect posture of the front legs and also the excessively low pasterns. I did not hesitate to contact the Dogoteka team for advice on which combination of products would help me solve the problem: using MultiAdapt and DOGOmaxi in just 20 days I was able to appreciate a clear improvement. I am also using the products of the DOGOteka line for my 13 month old female Great Dane who is growing in a healthy and harmonious way. In addition to the indisputable effectiveness of these supplements, I would like to emphasize the cordial availability and seriousness with which the customer is followed and supported for any eventuality. Dogoteka is a guarantee! Thanks!

_Angelica Gaffuri

ORTHOPEDICS and GROWTH

DOGOjunior®

Dietary complementary feed* in tablets for large breed dogs, useful for supporting joint metabolism in case of osteoarthritis. *Feed with particular nutritional or dietary purposes **PARNUT**

The breeder decided to use Dogoteka products, the Proartleg Junior (DOGOjunior®) was used precisely. The photos show the evolution of the situation which has been resolved in less than a month. This is just another of the testimonials shared by us that show how supplementing the puppy's diet can correct growth problems. ProArtLeg Junior -now on the market with the enhanced formula and new name DOGOjunior® is a product specially designed by the DOGOteka team to favor a harmonious development of the bones and joints of dogs and cats in the age of development. We thank Conte di Carmagnola kennel for allowing us to share their experience with the ProArtLeg Junior.

_Boxer puppy with deviation of the forelimb

DOGOdol®

Dogodol® is a complementary feed for dogs and cats indicated for a neuroprotective action.

PEA helps maintain the physiological balance of the nervous system.

DOGOteka product that performs a pain relieving function with natural active ingredients -DOGOdol. The result was surprising. Now he climbs the stairs much more willingly. After a couple of 10 day courses of DOGOdol the pain was completely gone.

_ Italo Mella Italy

WHAT IS PEA (PALMITOYLETHANOLAMIDE) THAT WE USE IN DOGODOL?

PEA is a substance that is normally produced by many cells in our body. In particular, it is found in very high concentrations in brain tissues. In the body, PEA is an endogenous factor that is produced as needed and acts as a biological modulator of chronic pain of various types associated with the activation of inflammatory and painful processes in individual cells of the body. Integration with complementary food Dogodol, which contains PEA, therefore allows the body to re-integrate the correct physiological reserves of this substance, which can change in certain situations.

TABLET 1000 MG

cat	1/2 tablet per day
dogs less than 10 kg	1 tablet per day

dogs from 30-40 kg	4 tablets per day
dogs over 40 kg	5 tablets per day

PACKAGING

DOGOdol®, 45 tablets of 1 g.

I have to praise the DogoDol tablets I got for our malinois Zena. Thank you a hundred times. Ever since she broke her teeth and already had 3 interventions, she started behaving strangely, quite nervously (constant nervous running from one room to another, jumping on top of the sofa and then down immediately, spinning, rapid breathing and drooling...). At first I thought it was due to tha fact she was in heat, then she had an apparent false pregnancy, but her behavior was all the time the same. In the end, we concluded that she had developed such behavior due to toothache, and Tjaša (from dog school Naraven pes) advised me to use DogoDol. I gave her 2 pills last night and today my "old" Zena is calm and relaxed. I can't believe it, I'm so happy because she couldn't tell me what was bothering her. It is more than clear that DogoDol helps her a lot. Thank you so much , Tamara Slovenia

_2 year old female Doberman, prepared by Dogoteka Italy

MultiAdapt

MultiAdapt® is a complementary feed, useful for promoting the natural immune defenses and for normal energy metabolism.

Specially formulated for dogs and cats that need a balanced and effective support for their well-being, MultiAdapt has a composition that includes various ingredients, useful individually, even more effective in synergy with each other.

We present you Hana a French bulldog that has since 4 moths of age big problems with skin. She made visits in different veterinary clinics, she went through all allergy tests that have discovered that she is allergic to allfood, plants, environment. She took long time Apoquell (oclacitinib)e corticosteroids. She went for special baths for dogs but problems always came back after she suspended corticosteroids. The owner asked for help Healthy dog Slovakia, distributor of Dogoteka products for Slovakia because she did not want that her dog takes corticosteroids. She was recommended to take CortiAdapt and MultiAdapt in high dosages and once in a week she was washed with shampoo with helichrysum extract. On this pictures you can see the results after 2 months of therapy but the first results were visible already after 3 weeks of therapy. The hair start to grow also on places where before for long time it was only skin, the skin is not irritated and itchy anymore.

Hana - French bulldog . The opinion was collected by Healthy dog Slovakia

MULTIADAPT CAN BE USEFUL IN CASE OF:

- + nutritional deficiencies
- + particular conditions such as pregnancy and breastfeeding
- + in growing puppies and elderly dogs and cats
- + to maintain perfect muscle tone in working and sports
- + states that need integration to improve performance (for example at the muscle level, to increase the immune system, etc.)
- + states of recovery from normal conditions (for example in a post-operative convalescent period)
- + in the convalescence of debilitating diseases due to stimulation of immune defenses due to its specific components
- + to maintain the skin and the hair in excellent conditions

COMPOSITION

Vitamins A, D3, B1, B2, B6, B12, C, E, Niacin, Biotin, calcium d-pantothenate, Selenium, Iron sulfate heptahydrate, L-carnitine, Spirulina, Rosa Canina, Astragalus membranaceus L.

I am very satisfied with Dogoteka products. After taking our little one from the breeder, we noticed that his leg was bending awkwardly; once and twice. Ms. Kasia Niemiec from Dogoteka Poland advised us on products for growth problems, which turned out to be a great solution for our EDZIA. Now his legs are straight and not bent for a long time. We will definitely continue the integration until the end of the development. The effect visible in the photos was obtained in less than 2 months using:

- DOGO Junior - MultiAdapt
- We recommend, EDZIU and Agatha.

Prepared by Kasia Niemiec, Dogoteka Polska

Yes, 5-year-old AZA (Imidiwan AMAZA) won the 1st place on the coursing in Koszecin!!!

On a daily basis, AZA uses MultiAdapt to ensure perfect metabolism and muscle tone. Before training, she is given CelerVisPet paste to instantly replenish her energy over time. Thanks to these preparations, her body is prepared for intense workouts, and AZA can do what she LOVES <3 Thank you and we recommend AZA and Iwona

_ Iwona Paprocka, Prepared by Kasia Niemiec Dogoteka

CortiAdapt

Complementary feed in liquid form for dogs and cats.

CortiAdapt® can be used in dog and cat nutrition.

Our continental bulldog Dora has problems with hot spots (acute wet dermatitis) several times a year. Wounds or abscesses appear on her skin. The area need to be shaved and cared for several times a day. This time I added CortiAdapt and MultiAdapt beside the shampoo, which has a drying effect. The healing process went much faster, and the hair almost healed back in less than two weeks.

_ Bulldog Dora, Saloon for animal care Koštrun, Sara Hribar repared by For Dog Slovenia

INDICATED TO SUPPORT

THE DERMAL FUNCTION IN CASE OF DERMATOSIS AND EXCESSIVE HAIR LOSS.

CortiAdapt

Mangime complementare dietetico n forma liquida per canì e gatti

Blackcurrant or Ribes Nigrum is a natural antihistamine that is very effective in preventing and combating allergy problems. In a similar way to cortisone, it acts precisely by stimulating the production of cortisol, it is a hormone that acts on the immune system and has a contrasting function with histamine. As result the allergic reaction with blackcurrant is stopped or slowed down. Furthermore, ribes nigrum is able to stimulate the adrenal cortex to ensure that the body produces adrenal steroids with an anti-inflammatory action. The latter are also able to temporarily inhibit the action of the immune system during the allergic reaction. It therefore acts as an immunomodulator. Ribes nigrum contains a lot of vitamin C which is used to fortify the immune system which has a key function in this allergy situation.

Viola Tricolor – also known as wild pansy, contains flavonoids, saponins and mucilages, useful for promoting normal skin function. Nigella Sativa - the seeds of Nigella Sativa have a high nutritional value; they contain fixed and essential oils, proteins, alkaloids and saponins. It has been shown that a large part of the biological activity of Nigella sativa seeds, in particular its beneficial action on the immune system, is due to the thymequinone, the main component of the essential oil, but which is also present in the fixed oil. (Pharmacological and toxicological properties of Nigella sativa B. H. Ali Gerald Blunden).

CortiAdapt® Complementary feed in liquid form for dogs and cats, bottle 100 ml

Indicated to support the dermal function in case of dermatosis and excessive hair loss.

This little treasure was introduced to me early April with massive skin issues. As you can see on the photos, the skin was heavily affected. I recommended changing the food and co-administration of CortiAdapt. In 2 more photos you can see improvement in skin condition after using a bottle of CortiAdapt.

_ Prepared by Petra Maibuechen, Germany

CortiAdapt® gel

Topical gel for animals with an emollient and nourishing action for the skin, able to soften and soothe red skin and keep it in good condition.

Dogoteka products have been used: MultiAdapt®, LactoAdapt®, CortiAdapt®, CortiAdapt® gel Absolutely without chemistry!!! There is one week of difference between before and after pictures.

_ Milo before and after, Prepared by Petra Maibuechen, Germany

Topical gel for dogs and cats formulated with Aloe extract with moisturizing and emollient action, Oak tree with astringent action and Lactoferrin indicated to promote skin trophism, favoring the integrity, the state of hydration and the elasticity of the skin of our four legged friends.

Protective, soothing and sanitizing formula, adjuvant in the treatment of skin conditions characterized by itching, redness and alterations of the hydrolipidic film.

Black currant (Ribes nigrum) is a plant of the Sassifragaceae family. It is one of those plants of which various parts are used and has numerous areas of application. The leaves, whose main components are triterpenes and a polyphenol complex, have skin purifying and regenerating properties. Often the extract of currant leaves is used in products for topical use in case of problems of alteration of the skin epithelium and in case of redness. Fruits too, rich in citric acid, malic acid, vitamin C, trace elements, polyunsaturated acids, flavonoids and anthocyanins, are useful for their astringent, skin toning and refreshing action.

The use of oak extracts is a widespread practice known since ancient times: acorn, roots and bark contain numerous active ingredients due above all to the presence of tannins such as catechins and ellagitannins; flavonoids such as quercetin; and, finally, resins and pectins very abundant in the protoplast.

Oak tincture is indicated to promote re-epithelialization and restore the physiological state of the skin.

Recent studies in humans have shown that Lactoferrin for topical use favors the reduction of discoloration and the improvement of skin trophism by exploiting its modulating and chelating properties.

PACKAGING

Gel in tube for topical use for animals, 100 ml

Apply a thin layer of product in skin folds and reddened areas, massaging carefully

Lactating American Staffordshire terrier female with severe dermatological problems, post partum, almost completely resolved with just 4 days of application of Cortiadapt gel. Cortiadapt gel contains lactoferrin normally present in breast milk and therefore can be used, without contraindications, even in lactation. The female will continue with Cortiadapt and Cortiadapt gel until complete healing.

American Staffordshire terrier

For years I was crazy about treating pimples and skin under the chin of my dogs especially in the summer! In the search to find something that did not contain cortisone and similar substances and after many tests after tests we have finalized a product that really works! CortiAdapt gel! A result on my dog in a few weeks of use.

_ Ksenija Dogoteka

LactoAdapt®

Complementary feed for dogs and cats Indicated for normal intestinal well-being, composed of pre- and probiotics.

It is recommended to take it without interruptions.

Welcome, we are the owners of three multi-breeds cats: Imbir, Cactus and Zula. We live in the countryside, where cats spend most of the day outdoors at this time of year. We have no control over further "delicacies" that are consumed: mice, birds. For some time, the older cat, Imbir started losing weight, became terribly thin. There were also problems with his fur: it was rough. Fortunately, Ms. Kasia offered us a product to remedy Imbir's health problems. Thanks a lot for LactoAdapt. With regular use, the kitten started gaining weight within a month. The hair has become silky and shiny. From that moment we regularly give the product. Thanks and highly recommend LactoAdapt.

_Zula, Imbir and Cactus multiracial cats Prepared by Kasia Niemiec Dogoteka

IN WHICH SITUATIONS IS THE USE OF LACTOADAPT **INDICATED?**

We recommend the use of LactoAdapt in all those "critical" passages, frequent in the life of our pet, which pertain to these 3 macro areas:

- + Diet (e.g. food stress) due to a change in diet or accidental ingestion of unsuitable food or eating disorders, poisoning.
- + Environment (e.g. environmental stress), caused by psychological or logistic factors (change of house, habits, arrival in new home, reference people, travel)
- + Medicines, e.g. taking specific drugs for existing pathologies or following surgery, indicated while taking antibiotics.

Numerous studies have shown that prebiotic and probiotic supplements in the diet of dogs and cats have a beneficial effect on the health of the gastrointestinal tract, especially if taken consistently over the long term.

We also recommend the use of LactoAdapt for preventive purposes.

HOW LONG SHOULD I GIVE LACTOADAPT® TO MY DOG/CAT?

We suggest a continuous use of LactoAdapt, this pre and probiotic complementary feed is specifically designed for the intestinal well-being of our pet.

DAILY PORTION FOR DOGS AND CATS

0 - 10 kg	1 tablet
10 - 20 kg	2 tablets
20 - 30 kg	3 tablets
< 40 kg	4 tablets

Can be taken without interruption!

PACKAGING

LactoAdapt® Complementary feed for dogs and cats useful for maintaining regular intestinal bacterial flora, 15 tablets of 1 g. LactoAdapt® Complementary feed for dogs and cats useful for maintaining regular intestinal bacterial flora, 60 tablets of 1 g.

Today I decided to share an opinion with you about LactoAdapt, a product recommended to me by Kasia Niemiec from Dogoteka Polska (official Dogoteka distributor for Poland). I think first of all that this information will be useful to breeders. When Stefcia was immediately after the caesarean section, the doctor prescribed an antibiotic for a few days. In such a situation, a good probiotic is also needed. I administered no probiotics on Friday night. In the drawer, however, LactoAdapt. I wrote to Mrs. Kasia if I can give it to her during breastfeeding because I don't have the usual probiotic. Of course! Stefcia takes one tablet a day. The puppies feel very well, the poop looks like a dough, zero diarrhea, soft bellies without swelling. Stefcia stopped farting after the highprotein food that the breastfeeding mother should receive. In a word, WE RECOMMEND! The puppies have only 2 weeks, surely when I change to solid food I will also give LactoAdapt that definitely helps the children's stomach. Thanks Kasia:) PS. If you have an adult dog with belly problems, poisoned or other diseases in which there has been a long antibiotic therapy that has influenced your digestion, we recommend it! STEFCIA mother and puppies - Kennel Happy Zwierzyniec FCI, Mrs Małgorzata Owczarek.

_ Małgorzata Owczarek, Prepared by Kasia Niemiec Dogoteka Poland

LactoAdapt STOP®

Dietary complementary feed (PARNUT), for dogs and cats indicated for the reduction of acute intestinal absorption disorders, during acute diarrhea and subsequent convalescent periods. Indicated in cases of:

- diarrhea
- acute intestinal absorption disorders

category

Generale is a fawn Great Dane male, he is 9 years old. When I am not at home, he likes to steal anything from the kitchen and often has diarrhea. He also often gets diarrhea after walks, as he likes to explore the nearby forests. We were among the first to try the new Lactoadapt STOP product, which stopped his diarrhea within a few hours. We can finally sleep peacefully at night. I always have the product at home because it works incredibly fast.

Marija in Generale

WHAT IS THE DIFFERENCE BETWEEN LACTOADAPT AND LACTOADAPT STOP?

They are both products designed for the intestinal wellbeing of dogs and cats, while the LactoAdapt ensures the maintenance of the optimal state of the intestinal tract, the LactoAdapt STOP is necessary "as needed" when one or more episodes of diarrhea occur, to restore the good bowel function and stop diarrhea.

HOW TO TAKE LACTOADAPT STOP?

LactoAdapt STOP is a complementary feed for dogs and cats (PARNUT) indicated for the reduction

of acute intestinal absorption disorders, during acute diarrhea and subsequent convalescent periods.

We suggest using the product when the symptom-diarrhea

We recommend to stop administering the product when the dog's normal intestinal activity is restored,

1 to 7 days of administration may be required.

Continue with LactoAdapt 15 or 60 tablets for normal intestinal health. For any doubts, it is recommended to consult the veterinarian.

DAILY PORTION FOR DOGS AND CATS

0 - 10 kg	1/2 tablet/twice a day
10 - 20 kg	1 tablet/twice a day
20 - 30 kg	2 tablets /twice a day
< 30 kg	3 tablets twice a day

Recommended period of use: From 1 to 7 days.

Warnings: It is recommended to seek the advice of a veterinarian before use.

PACKAGING

LactoAdapt STOP® Dietary complementary feed for dogs and cats indicated for the reduction of acute intestinal absorption disorders, during acute diarrhea and subsequent convalescent periods, 6 tabs of 2 g.

What are feeds with particular nutritional or dietary purposes PARNUT?

Dietary feeds are able to satisfy a particular nutritional purpose of animals, whose functions (digestive process, absorption or metabolism) are likely to be temporarily altered or are temporarily altered in an irreversible form. From the intake of this type of feed, animals benefit because they meet the needs of their health.

Food for animals intended for particular nutritional purposes, known by the acronym PARNUTS (Feed for Particular Nutritional Purposes) are regulated by Directive 2008/38 EC.

Compared to the category of complementary feeds, for complementary feeds intended for particular nutritional purposes a precise claim is defined, a period of use, a qualitative-quantitative composition profile suitable for satisfying a specific nutritional purpose and the intervention of the figure of the veterinarian before use or in case of extension of the period of use.

DOGOteka PARNUTS priducts:

DOGOMAXY, DOGOMINI, CORTIADAPT, LACTOADAPT STOP, FERTIADAPT

DiaGiar®

New complementary feed, for dogs and cats, designed for normal intestinal well-being. It is formulation, rich in essential oils associated with natural extracts, contributes to the maintenance of physiological intestinal health thanks to their antiseptic, antidyspeptic and antioxidant functions.

Does your cat/dog have problems with giardia? Be sure to read our next testimony!!! 17-month-old Thai cats POLA and PARYS with lamblia/giardia problems owner: Beata Rowińska I sincerely recommend the products sold by Dogoteka Polska, Ms. Kasia Niemiec. After 5 months of ineffective treatment of giardia/lamblia in cats, we started giving DiaGiar and LactoAdapt. These products worked. There is no reinfection. Incredible relief.

I recommend! POLA. PARIS Beata

_ Prepared by Kasia Niemiec, Dogoteka Polska

CUSTOMER REVIEWS

Is Diagiar® recommended to be used after the diagnosis of Giardiasis and to be associated with the treatment with the drug therapy prescribed by the veterinarian?

It is an ideal use of our complementary feed. Diagiar® is indicated in association with the drug (given with the advice of the veterinarian) until the positivity to girdiasis disappears. In case of use without the drug, the therapy will be longer, but always until the positivity disappears. As a prevention, it is particularly indicated in the summer periods with a greater case of positivity.

CAN I USE DIAGIAR® IN PREGNANT FEMALE?

Diagiar® contains the essential garlic oil and this oil can alterate the taste of the milk. When female is pregnant the process of the production of milk has started and this taste can persist. What can happen is that newborn puppies refuse the mother's milk because of the strong taste. Otherwise the product is safe for the mother.

My puppy was tested positive for giardia. I live in the city center and go to the park with my dog every day. The vet prescribed Panacure therapy. Although we repeated the treatment several times, the puppy continued to be positive at test for giardia and had problems with flatulence and foul-smelling and soft stools. My veterinarian therefore advised me to start therapy with DiaGiar®. In the Dogoteka company they had explained to me that I had to give it for at least a couple of months. Today after two months of treatment with DiaGiar® for the first time the dog is negative for giardia. I am very happy with the product and that my vet recommended it to me. Living in the city, attending public parks this product will help me as a prevention in the future.

_My puppy was tested positive for giardia

Dogo Digestive®

Dogo Digestive is a complementary feed for dogs and cats in palatable tablets formulated with Betaine hydrochloride, Mango, Gentian and Angelica Archangelica to promote normal digestive function.

Dogo Digestive is a complementary feed for dogs and cats for normal gastric function.

Supports your pet in all stages of the digestive process.

Magnolia supports the digestive function and has an antispasmodic action.

Anise, gentian and angelica are instead herbs known for their digestive and carminative properties,

that is able to relieve gastrointestinal disorders such as flatulence, nausea and abdominal swelling. These herbs contain essential oils and active compounds that promote intestinal motility and the secretion of bile, contributing to a better digestion of fats and the reduction of intestinal inflammation.

In summary, the consumption of foods containing natural digestive enzymes and carminative herbs can promote the stages in the digestive process of dogs and cats, improving digestion and assimilation of nutrients, and reducing gastrointestinal discomfort. However, it's important to always consult your vet before making any significant changes to your pet's diet.

30 divisible tablets of 1 g

CUSTOMER REVIEWS

WHY IS DOGO DIGESTIVE PARTICULARLY SUITABLE IF YOUR DOG IS FED ON INDUSTRIAL FOOD (DRY OR WET?)

If your pet eats mostly commercially processed foods such as kibble or canned food, even if the rations are designed and balanced specifically for animals, there is a good possibility that it is not getting all the enzymes it may need as processed foods lack digestive enzymes, which are instead present in

While your pet's body may produce some of the enzymes needed to digest food, it always relies on the enzymes naturally present in fresh food to aid in optimal digestion. Digestive enzymes are nutrients that can contribute to many biochemical reactions of the body and are present in large quantities in many fresh foods, as well as being naturally produced.

Usually the activity of the stomach, intestines, liver and pancreas manages to provide the right enzymatic contribution to carry out the various organic functions, but sometimes the mechanism gets jammed. Consuming certain foods rich in natural digestive enzymes helps rebalance the sufficient amount to the body to improve digestive processes, giving a new balance, but this is not always possible or indicated in large quantities in the diet of dogs and cats.

Additionally for highly processed diets such as kibble that is high in starches and carbohydrates, including rice, ancient grains, potatoes or legumes, your pet needs a specialized digestive enzyme formula that can handle the heavy carbohydrate load. In addition to a diet based on refined foods, even a stressful period or a food intolerance they can lead to a lack of digestive enzymes or difficult digestive activity. For all these reasons, we recommend adding Dogo Digestive to your

WHAT DOES DOGO DIGESTIVE CONTAIN? AND HOW DO THE NATURAL ACTIVE INGREDIENTS CONTAINED WITHIN IT HELP THE DIGESTIVE PROCESS IN DOGS AND CATS?

Dogo Digestive, an extremely innovative complementary feed, containing a series of active ingredients such as Mango, Magnolia, Anise, Gentian and Angelica which support and favor all stages of the delicate digestive process. Here are some functions of these natural active ingredients:

The enzymes present in mango help promote efficient

These enzymes facilitate the digestion of nutrients and their absorption in the dog's or cat's intestines, contributing to a better assimilation of food.

I bought Dogodigestive as soon as it comed the market. My dachshund, who is already old and a barfist, has been having a lot of digestive problems lately. He has a hard time digesting raw meat. His digestion and his metabolism have slowed down, most of the time he is looking to eat grass, and then he vomits, sometimes even yellow mucus and saliva. Changing food and diet didn't help, so I immediately bought Dogodigest from Dogoteka. Digestion has improved, he no longer has stomach problems, he is not looking for grass and he is no longer vomiting.

Carolina and Rocky the dachshund

SUPPORT FOR THE PREPARATION OF OESTRUS AND REPRODUCTION

FertiAdapt®

Dietary complementary feed for dogs and cats (PARNUT).

Indications

+ New complementary feed for both dogs and cats, of both sexes, formulated and recommended for the preparation of the oestrus and reproduction.

Today I want to share with you my personal experience on Dogoteka products. My dog Ippon della Baia Azzurra has just turned 4 years old. Mature and in good shape we thought it was the right time to freeze his semen. It has always had good fertility, but we wanted to prepare it well to freeze good semen for future use. He started taking FertiAdapt in November every day. This is his spermiogram dated 2/18/2021. Over two billion spermatozoa, an ejaculate with excellent concentration and excellent motility. Very low percentage of primary and secondary anomalies.

_ Ksenija founder of Dogoteka

My breeding bitch Perlah has always had low numbers of puppies after she was covered by a male. Her last litter she had 3 puppies and before that only 2. After her last litter I gave her a regiment of Fertiadapt with Multiadapt everyday. She was inseminated on Jan 28th. We kept our fingers crossed hoping for a good outcome. Today she was confirmed pregnant from ultrasound with 9 PUPPIES!! I truly believe it is because of your product. I just wanted to thank you and let you know that this wouldnt have been possible without these supplements!! AgainTHANK YOU!!! A very happy breeder,

_ David Weeks, Von der Zwei Schaefer Haus kennel, Gainesville United States of America

WHAT IS THE OPTIMAL USE OF THE PRODUCT IN THE FEMALE AND IN THE MALE TO OBTAIN GOOD **RESULTS?**

It is advisable to administer FertiAdapt® to the female at least 4-5 months before the heat, when planning the mating (ideal from the last heat finished to the heat, when planning the mating). For the male we recommend the FertiAdapt® continuously during the periods of reproductive activity or at least 2 months before the mating / semen collection.

CAN FERTIADAPT AND MULTIADAPT® BE USED **TOGETHER®?**

Yes, precisely because of the different function attributed to these two complementary feeds, it is useful to combine them, given their complementarity in helping the dog to withstand particularly intense, stressful or demanding periods. FertiAdapt® is recommended to be administered continuously in the breeding female from the end of the last heat up to the next heat when mating is planned. We recommend suspending FertiAdapt® at the

Another milestone in our breeding practice. Kennel Claudia Bohemica would like to thank everyone involved (Veterina Alois Láznička, and Veterina Tachov) for veterinary care. Acldog Praha, for providing us the fantastic FertiAdapt and MultiAdapt products we used in preparation. And the company DOGOteka for producing these products. In this case, preparation for reproduction involved almost 6-year-old champion SUPRA and her planned last cover. Despite the initial complications and insecurities, when the chance of getting pregnant was very small, it was insemination with frozen semen (dog's sperm was used, and various qualities were selected by semen in the worst quality-19 % of live sperm after thawing). We hoped, we believed. To our surprise, an incredible 11 healthy and beautiful babies were born naturally and without veterinary assistance. Thank you very much to everyone who stood behind us and supported us.

DOGOdrops®

DogoDrops – Soothing drops for topical use for animals useful for cleansing and hydrating the eye area. Thanks to the plant extracts of Hamamelis, Chamomile and Calendula, Dogo drops is able to soften and soothe the skin and keep it clean and in good condition.

Shih Tzu dog with eye injury - owner Katarzyna Niemiec KUBA, a veteran dog full of vigor and verve and it's not the first time he has suffered an eye injury. But this time it was really bad....... When he came to me he had a stick stuck in his eye and it didn't take much investigation to see that there was a MEGA hole in his cornea. The eye was really ready to be sewn -shut forever but we started the fight. Corneal ulcer and the swab showed staphylococcus pseudintermedius and enterobacter. As you know, we always test our products first on our dogs. So we immediately started the therapy with DOGOdrops eye drops several times a day. After just 3 days, there was a big improvement, and after 2 weeks the eye was healed and I was really happily SHOCKED by the improvement.WE RECOMMEND DOGODROPS

_CUBA and Kasia. Prepared by Kasia Niemiec, Dogoteka Polska

HOW TO CORRECTLY USE DOGODROPS?

Dogodrops drops can be used directly on the eye area of the animal, thanks to the aid of the spout with a practical dropper. Alternatively, with the help of gauze, soaking it in the product and gently dabbing, in order to easily remove mucus and encrustations from the animal's skin.

CAN DOGODROPS BE USED ON PUPPIES?

Yes, the product is also suitable for puppies and cats thanks to its particularly delicate, soothing and moisturizing formulation and the use of plant extracts. I

IS THE PRODUCT SAFE FOR MY PET?

Yes, the product is safe and effective. DogoDrops concentrates in its protective formulation a series of plant extracts: Hamamelis, Chamomile and Calendula, particularly useful in case of itching, redness or alteration of the hydrolipidic film of the skin.

COMPOSITION

Calendula Officinalis Hamamelis Virginiana Chamomilla Recutita (Matricaria)

INSTRUCTIONS FOR USE

Put a small amount of product on gauze and gently pat the area around the eyes.

External use. Do not use in case of intolerance to the ingredients described. Keep the bottle tightly closed away from sources of light or heat.

CelerVis Pet®

Complementary feed for dogs in paste, especially those subjected to efforts like work or sport. Its specifically designed ingredients, aimed at the animal's energetic support, provide "energy ready to use" to help the dog during the activity.

Formulation able to offer the body a prolonged energy reserve over time.

I wanted to thank you very much for the advice to try the Celervis. Simply fantastic for my dogs in Agility. Intensive races with even 4 manches a day and today one did a double stage in the morning and in the afternoon. Always fit, fast recovery and top energy and speed.

_ Ilaria Carimati, Italy

Complementary feed for dogs in paste, especially those subjected to efforts like work or sport. Product designed and created specifically for those dogs that have an immediate and effective need for an energy supplement. As for man, even the animal, subjected to a continuous effort given both by work and by a sport that requires a lot of energy, may need immediate integration. Its specifically designed ingredients, aimed at the animal's energetic support, provide "energy ready to use" to help the dog during the activity. Thus was born CelerVis Pet® which, thanks to all its ingredients, specifically studied, aimed at supporting the animal's energy (for example, vitamins such as B12 or B6; minerals such as iron; proteins such as taurine and carnitine) , provides "ready to use energy" to help the dog during the activity. For this purpose, the choice of the appropriate dosage form is also aimed, a paste that is easier to administer to your animal and also more easily assimilated; in quantities, according to weight, as per instructions on the package. In its renewed formulation has been added the blend ProVisPet®, exclusively for Dogoteka, which combines the properties of Carnitine, Maca (Lepidium Meyeni) and Medical Herb (Medicago Sativa) in a mix specially designed to promote the proposed action of the product. A pool of substances that work together to optimize the energy yield

of the ingredients. Carnitine, an amino acid important for the formation of energy, in association with the two plant extracts which, within their composition, boast a large amount of all those nutrients, also essential for energy support during periods of stress or great efforts and to integrate the components that are "consumed" during physical activity.

Formulation able to offer the body a prolonged energy reserve over time.

Recommended for dogs that:

- + practice sport or work
- + convalescent subjects
- + debilitated subjects + lactating females
- + post-operative

HOW TO USE

1 g equal to 2 cm of paste - per 5 kg of live weight per day orally or directly on the food for 10/15 days.

French bulldog female after surgery on the third day of life with an antibiotic from day one after severe bleeding with virtually no chance of survival is alive and well! We used CelerVis Pet energy paste the day after the surgery. The female was very weak, "she was flabby", her tongue was pale, her belly was almost blue. The puppy wanted to live but she lacked strength ... and the energy paste was given to her. Currently, the puppy is 20 days old and receives the energy paste every day. She caught up with the rest of the puppies in the litter and even outdid some of them. A week after the operation at the vet check, he was amazed and said it was impossible that she was alive after a huge loss of blood and an umbilical cord stump with such heavy bleeding, that it had to be removed with an operation on the third day of life. This paste should be used after any surgery or lifting of babies after birth. Both mom and puppies love CelerVis Pet. I highly recommend CelerVis Pet thanks to him we won!!!

SOFT PAD BUTTER — TO PREVENT, CURE AND MAINTAIN THE SKIN'S INTEGRITY.

Soft Pad Butter

Soft Pad Butter is an extremely effective butter including rich active ingredients designed for the care and protection of skin of our animal friends. Soft Pad Butter is product designed to prevent, cure and maintain the skin's integrity.

Labrador retriever suffering from hereditary nasal parakeratosis (HNPK), which leads to a particularly dry nose on the upper (dorsal) side where a layer of dry and cracked skin is formed. Fissures can occur, which lead to secondary bacterial infections. The photo shows the nose before the Soft pad butter application and one week after a daily application of the Soft pad butter.

_ Labradorec, Pripravil For Pets, ing. Katarina Ceresnakova Slovaška

Soft Pad Butter is an extremely effective butter including rich active ingredients designed for the care and protection of skin of our Animals Friends. Soft Pad Butter is product designed to prevent, cure and maintain the skin's integrity. Thanks to the use of natural moisturizing, emollient, and softening active ingredients, it performs an effective regenerative and normalizing action of the skin, dramatically reducing calluses, giving relief in the event of cracking and abrasion, softening the callus from decubitus. It also works to strengthen the resistance of paw pads. Soft Pad Butter is a safe, dermatologically tested and formulated product, thanks to our research and development laboratories, with natural patented ingredients of excellent quality.

Soft Pad Butter is a high quality product, made in full compliance with current health regulations:

- + natural ingredients and 100% without petroleum
- + with patented Glipeptide®, gives relief during irritable conditions
- + dermatologically tested

INSTRUCTIONS FOR USE

Apply on the skin of the animal to reduce redness, soften calluses, heal abrasions, soothe the feeling of irritation (glipeptide), and for proper healing. Apply on the affected area several times a day, follow the directions of the veterinarian.

French bulldog dog BENIO of Lucky Zwierzyniec - owner Łukasz Jarząbek The 4-year-old French bulldog BENIO has so far had an unpleasant nose condition that many dogs are facing, a dry nose. He was also injured in the nose by his friend. The sign was profound and when everything failed, the owners of BENIO took Soft Pad Butter. Now a frequent lubrication of the nose will no longer be a problem for BENIO, everything has healed beautifully. Photos before and after the treatment. Thanks Kasia Niemiec.

_ Prepared by Kasia Niemiec Dogoteka Polanda

Hello. These are the toe pads of our 6 years old female and are appropriately worn, dry and cracked for her years and activities. We were looking for a suitable, above all, natural product that could repair the damage. We found it in Soft Pad Butter. The content of the product pleasantly surprised me as it contains only natural ingredients. The toe pads were lubricated 2-3 times a day and the condition improved greatly in a very short time, in five days. Let me also mention that we also lubricated the callus on the elbows with the product and almost removed it. Our experience with Soft Pad Butter is really great so I recommend it to anyone who has four-legged friends with a similar problem.

DOGOmilk

DOGOmilk pet cleanser. New "Owner & Pet" cleanser, designed for cleansing animals with an adequate pH, also gentle on human skin. This ambivalence is due to the use of an important ingredient, known since ancient times, as an excellent emollient, nourishing and illuminating remedy: donkey milk.

Freduś is 10 years old, due to his age, despite regular care, his hair was dry and dull. Because I have so many years of experience with this breed, I have used various cosmetics but without many results. On the advice of Mrs. Kasia Niemiec (company Non Dimenticare) I used Dogomilk shampoo. I highly recommend it. The hair after is soft, sparkling, silky and pleasant to the touch. It is very effective, after the first application a significant improvement of the hair is seen, and it has a very good perfume. Dogomilk is really worth it, this shampoo does wonders.

_ Yorkshire terrier - owner Anna Pasek, Prepared by Kasia Niemiec Dogoteka Poland

New "Owner & Pet" cleanser, designed for cleansing animals with an adequate pH, also gentle on human skin. This ambivalence is due to the use of an important ingredient, known since ancient times, as an excellent emollient, nourishing and illuminating remedy: donkey milk. Thanks to its particular composition, it is ideal for the natural care of animal skin. In fact, it contains: vitamins, especially A, B, C, D and E; great allies for skin health. Vitamin A helps the skin in regenerative processes and, together with C, prevents skin aging. The others, thanks to their antioxidant action, also assist in the maintenance of physiological skin function. Proteins, such as lysozyme and lactoferrin, are substances with purifying and nourishing properties.

Minerals, it mainly contains magnesium, potassium, calcium and phosphorus, which protect the skin from damage from external agents. Polyunsaturated fatty acids, especially omega 3 and omega 6, which help keep the skin supple and hydrated. Amino acids, also allies of skin well-being by preventing the damage of cellular aging. For all these characteristics, the cleanser is indicated for the health of the delicate skin of the "pet"; to regain well-being in case of redness, even itchy, thanks to its antioxidant, emollient and soothing properties.

INSTRUCTIONS FOR USE

Use a proportional quantity of product to the amount of water or to the body to be cleaned. Concentrated shampoo to be diluted prior to use.

MIDAS Evasion this is the name of this beautiful dog. I use and recommend DogoMilk shampoo. After each bath with this shampoo, the hair is soft and shiny and what is important without the application of an additional conditioner, it combs perfectly (there is no need to be treated with scissors). In addition, the smell of shampoo is

Maddalena Bukowska, Prepared by Kasia Niemiec Dogoteka Poland

Remember the little and beautiful MERCEDES Tibetan Orchid FCI? Some time ago you saw her after her first bath with DogoMilk shampoo, today another beautiful photo also after a bath. Look at this star, doesn't she look GREAT. We already know from the owner of Joasi Skupień that she is happy with the shampoo. We are waiting for more photos of a lovely girl and her beautiful coat

DogoSTOP Spray®

SOLUTION FOR EXTERNAL USE FOR DOGS with cleansing and dermoprotective action. The product has a cleansing, moisturizing and dermoprotective action on the animal hair. The essential oils contained also give the animal's fur and skin a pleasant scent that takes care of the hair by perfuming and protecting it, and thanks to the essential oils it contains it is excellent for repelling annoying insects.

This time the wonderful LUA sent us a picture from a beautiful holiday by the sea, during which its owner Barbara Waligóra is keeping her safe with our DogoSTOP Spray. Like every year, the time has come when you have to think about protecting your pet from annoying insects such as: ticks, mosquito, flies, fleas. More and more people are choosing natural products for their pets. That's why we decided to create a DogoSTOP Spray. The product has a cleansing, moisturizing and dermoprotective action on the animal hair. The essential oils contained also give the animal's fur and skin a pleasant scent that takes care of the hair by perfuming and protecting it, and thanks to the essential oils it contains it is excellent for repelling annoying insects.

_Opinion Barbara Waligóra

HOW MANY TIMES A DAY SHOULD I APPLY DOGOSTOP SPRAY?

It is recommended to apply the product before each outing, paying particular attention to the paws and lower abdomen, if the dog is staying outdoors, repeat the application morning and evening.

IF THE DOG GETS WET, IS IT NECESSARY TO REPEAT THE APPLICATION?

Yes, for greater safety, especially during the hottest season, we recommend repeating the application. If the dog returns completely wet after outing, it is advisable, once dry, to spray the product again.

CAN DOGOSTOP SPRAY HARM THE DOG?

Absolutely not, the product contains safe and effective natural substances, in fact the application can be repeated several times a day; however, we underline that, even if there are no contraindications, the individual sensitivity of each animal must be taken into consideration, as with all products, only if it should scratch conspicuously, suspend the application.

INSTRUCTIONS FOR USE

Shake before use. Spray evenly on the animal's fur and massage lightly. The product performs an action that persists for many hours. If the animal stays outdoors, a daily application is preferable, especially during the summer months. Contains Pelargonium graveolens stem leaf oil, alpha-pinene, Eucalyptol: May produce an allergic reaction.

Not all dogs have the fortune to travel with their owner on vacation. This year it is Lago di Garda - a lake in northern Italy, the largest and cleanest lake in the country. In the photo you can see how the dogs admire the distant water from the shore. Due to the fact that Kasia, the owner of the dogs, is a very responsible owner of her pets, she protects them against ticks, mosquitoes. flies, flies, fleas and other annoying insects with DogoSTOP Spray, a natural preparation of Dogoteka. WE RECOMMEND

_Shih tzu dogs on holidays, Prepared by Kasia Niemiec, Dogoteka

I purchased the DOGO STOPSpray product from DOGOTEKA. It is an excellent product that with a pleasant fragrance repels any type of insect. It does not produce any repulsion to the dog that quietly lets itself be "sprayed", almost happy to receive the protection from annoying insects. Not to mention the danger of the sand flies responsible for leishmaniosis - a terrible disease. I highly recommend it!
